Win

In Adobe Bridge:

Click on Edit at the top of the screen.

Choose Color Settings.

Click on Show Saved Color Settings Files.

Put the .csf file in the folder that opens.

Make sure the SPI_Adobe_Color_Settings profile is selected in the Color Settings window. Click Apply.

That profile will now be applied to all of your Adobe Applications.

Color Settings

Not Synchronized

Your Creative Cloud applications are not synchronized for consistent color. "Apply" will synchronize Creative Cloud Color Settings.

General-purpose color settings for screen and print in North America. Profile warnings are disabled.

North America Newspaper

Preparation of content for common newspaper press conditions in North America. CMYK values are preserved. Profile warnings are enabled.

North America Prepress 2

Preparation of content for common printing conditions in North America. CMYK values are preserved. Profile warnings are enabled.

North America Web/Internet

Preparation of content for non-print usage like the World Wide Web (WWW) in North America. RGB content is converted to sRGB.
